05. SOP & ADDITIONAL INFORMATION

My fascination with Artificial Intelligence is rooted in its ability to bridge the gap between complex mathematical abstractions and tangible, real-world impact. Having completed my B.Tech in Artificial Intelligence and Data Science with a 9.59 CGPA, I have built a rigorous foundation in machine learning and deep learning. I am driven to contribute to the frontier of AI research, particularly in high-stakes domains like healthcare, and I am eager to join a research-driven environment that fosters interdisciplinary innovation. My research journey began with a Summer Research Internship at SVNIT, where I focused on the automatic identification of Traumatic Brain Injury (TBI) lesions from MRI images. By optimizing preprocessing pipelines and implementing architectures like U-Net and ResUnet++, I achieved a segmentation accuracy of 98.4%. This work contributed to a co-authored research paper on kidney and tumor segmentation presented at the IEEE Region 10 TENSYP 2024 conference. Beyond research, I won 2nd prize at a National Level Data Science Challenge for my work on nuclei instance segmentation. In a professional capacity, my internship at TechUp Labs expanded my expertise into production-level AI. I developed a system using Gemini Pro for OCR and ResNet for image classification, achieving 95.8% accuracy across multiple social media platforms. Deploying this solution using Docker and Flask provided me with a comprehensive understanding of the end-to-end machine learning lifecycle. I am an aspiring researcher. With a proven track record in academic excellence, published research, and industrial implementation, I am prepared for the rigors of graduate studies.
